1. (currently amended) A method of scheduling [and receiving by a user] a reminder call from an automated, computerized voice message storage and redelivery system (SRS) and receiving by a subscriber a reminder call from the SRS comprising the steps of:

- A. providing to the SRS when a reminder call is to be made by the SRS;
- B. providing to the SRS by a subscriber each telephone number that is to be called by the SRS to

deliver a reminder call and information as to whether the telephone associated with the number will be answered by a human voice or a digital voice;

- C. providing to the SRS the message to be included in the reminder call;
- D. recording by the SRS the information provided in Step A;
- E. calling a telephone number of step B as provided in step A;
- F. if the telephone number of step E is answered, determining by the SRS if a human voice or digital voice has answered the telephone; and
- G. selecting the manner in which the message of step C will be delivered based upon the determination of step F.

15. (currently amended) An automated, computerized voice message scheduling, storage and redelivery system for providing a reminder call to a remote telephone, comprising a computer means for executing software commands, a telephone connection means operatively connected to said computer means for calling and answering a telephone call from a remote location, a signal recognition means operatively connected to said telephone connection means and to said computer means for determining if a telephone called from said telephone connection means has been answered by a human voice or by a digital voice, memory means operatively connected to said computer means for scheduling and storing voice messages for remembering the number of each remote telephone and information as to whether the telephone will be answered by a human voice or digital voice provided by a subscriber to said system, program means for operating said computer means for scheduling, receiving, recording, and redelivery of voice messages, said program means including means for calling a remote telephone number; means for determining if the telephone number is answered and determining by said signal recognition means if a human voice or digital voice has answered the

telephone; means for providing that if a digital voice answers the telephone whether such digital voice is an automated attendant answering system (AAA), a voice mail system (VMS), or an automated answer machine (AAM).
